## 1 MAIN FEATURES

Relaying on the company's thirty-years experience acquired in the manufacture of fan coils, Galletti presents its new line ESTRO

New rounded shapes and new colors that are perfectly integrated with the current interior design criteria, fully complying with the architectural requirements.

New control panels for controlling and regulating the temperature by means of a microprocessor-based system, which adapts the operation of the fan coil automatically when room conditions change.

To carry out the ESTRO project, high quality materials have been selected, that together with the great care dedicated to the assembly of the main components grant the performances reliability and acoustic confort of the Galletti fan coil.

New constructive design that unifies the vertical mounted models with the horizontal mounted models:

- FL** Wall mounted installation with decorative cabinet with vertical air outlet.
- FA** Wall mounted installation, with decorative cabinet and inclined air outlet.
- FU** Floor / ceiling installation with decorative cabinet, vertical air outlet and suction grille complete with filters.
- FP** Ceiling installation with cabinet, with air outlet grilles and air suction from rear.
- FB** Low-body (height 438 mm), floor standing with decorative cabinet with vertical air outlet and air suction grille complete with filters.
- FBC** Low body concealed for horizontal and vertical installation, 412 mm height, air suction from front, heat insulated galvanised sheet casing. .
- FC** Vertical and horizontal recessed, bearing structure made of thermally insulated galvanized steel sheet.
- FF** Vertical or horizontal concealed with heat insulated galvanised sheet casing, front air suction.

### DECLARATION OF CONFORMITY

Galletti S.p.A. with head office in via Romagnoli 12/a, 40010 Bentivoglio (BO) - Italy, declares herewith under its own responsibility that the estro fan coil units, models **FL**, **FU** and **FC**, terminal units for air-conditioning and heating systems, are produced in **accordance with EEC Directives 73/23, 89/392, 91/368, 93/44, 93/68, 89/336, 98/37 and subsequent modifications.**  
Bologna, 01/08/2001

Luigi Galletti

President

### OPERATING LIMITS

- > thermal fluid: water
- > water temperature: from 5°C to 95°C
- > maximum operating temperature: 10 bar
- > air temperature: from 5°C to 43 °C
- > power supply: +/- 10%

The Galletti fan coil of the ESTRO series are certified by EUROVENT that grants the the reliability of the data reported in this technical catalogue.

## 2 VERSIONS AND MAIN COMPONENTS

### FL wall mounted

- > Covering cabinet made of thick steel sheet panel, (10/10 mm), with side parts and air outlet grille (orientable by 180°) made of ABS. The side doors allow the access to the technical space and to the control panel (option).
- > Bearing structure made of thick galvanised steel sheet (up to 15/10 mm), insulated with self-extinguishing Class 1 heat insulating panels and supplied with an installation kit (wall screws).
- > High efficiency heat exchanger, made of copper pipe aluminium fins fixed to the pipes by means of mechanical expansion, equipped with brass manifolds and air purge valve. The units normally come with water connection on the left side, but the heat exchanger can be turned, on the field, by 180°.
- > 3-speed electric motor installed on vibration damping-supports, complete with built in capacitor and thermal protection for the windings.
- > Double-intake centrifugal fans, statically and dynamically balanced and coupled directly to the the electric motor; they are made of:
  - antistatic ABS with staggered blades and wing profile
  - aluminium (models 1, 5, 6, 10, 11 and 12)
- > Washable air filter made of beehive polypropylene, installed on galvanized sheet frame with safety grille, easy to remove for maintenance operations. The filter is fitted to the covering cabinet by means of 1/4 round screws (not in size 12).

### FA wall mounted

- > Covering cabinet made of thick steel sheet panel, (10/10 mm), with side parts and air outlet grille (orientable by 180°) made of ABS. The side doors allow the access to the technical space and to the control panel (option).
- > Bearing structure made of thick galvanised steel sheet (up to 15/10 mm), insulated with self-extinguishing Class 1 heat insulating panels and supplied with an installation kit (wall screws).
- > High efficiency heat exchanger, made of copper pipe aluminium fins fixed to the pipes by means of mechanical expansion, equipped with brass manifolds and air purge valve. The units normally come with water connection on the left side, but the heat exchanger can be turned, on the field, by 180°.
- > 3-speed electric motor installed on vibration damping-supports, complete with built in capacitor and thermal protection for the windings.
- > Double-intake centrifugal fans, statically and dynamically balanced and coupled directly to the the electric motor; they are made of:
  - antistatic ABS with staggered blades and wing profile
  - aluminium (models 1, 5, 6, 10, 11 and 12)
- > Washable air filter made of beehive polypropylene, installed on galvanized sheet frame with safety grille, easy to remove for maintenance operations.

### FP Ceiling installation

Supply and installation of GALLETTI model ESTRO FP floor/ceiling-mounted fan coil unit (air intake on rear, vertical air flow), mainly consisting of:

- > Cabinet composed of a steel sheet panel (thickness 10/10 mm), side panels and air outlet grille (swinging by 180°) built from ABS. The side doors make it possible to access the technical compartments and the control panel (accessory).
- > Bearing structure built from galvanised sheet steel (thickness up to 15/10 mm), insulated by means of Class 1 self-extinguishing panels, supplied with an installation kit (wall screws). The unit is supplied complete with a double condensate collection and drainage system; in case of horizontal installation, condensate is collected in a capacious drip tray.
- > High efficiency heat exchanger made with copper piping and aluminium fins blocked to pipings by mechanical expansion, provided with brass manifolds and air vent valves. The heat exchanger usually comes with water connections mounted on the left, but it can be turned by 180°.
- > Three-speed electrical motor, mounted on vibration damping couplings, complete with permanently activated capacitor and winding thermal protection.
- > Double suction centrifugal fans, statically and dynamically balanced, directly connected to the electrical motor, made with:
  - antistatic ABS, with blades having an airfoil section and offset modules, or aluminium.
- > Honey-comb polypropylene washable air filter, mounted on a galvanised sheet frame protected by a net, easily removable for maintenance operations. The filter is secured to the cabinet with ¼-turn screws.

### FU Floor / ceiling installation

- > Covering cabinet made of thick steel sheet panel, (10/10 mm), with side parts and air outlet grille (orientable by 180°) made of ABS. The side doors allow the access to the technical space and to the control panel (option).
- > Bearing structure made of thick galvanised steel sheet (up to 15/10 mm), insulated with self-extinguishing Class 1 heat insulating panels and supplied with an installation kit (wall screws). The unit is provided with a double system for the collection and discharge of the condensate; in case of horizontal installation the condensate is collected in a wide drip tray.
- > High efficiency heat exchanger, made of copper pipe aluminium fins fixed to the pipes by means of mechanical expansion, equipped with brass manifolds and air purge valve. The units normally come with water connection on the left side, but the heat exchanger can be turned, on the field, by 180°.
- > 3-speed electric motor installed on vibration damping-supports, complete with built in capacitor and thermal protection for the windings.
- > Double-intake centrifugal fans, statically and dynamically balanced and coupled directly to the the electric motor; they are made of:
  - antistatic ABS with staggered blades and wing profile
  - aluminium (models 1, 5, 6, 10, 11 and 12)
- > Washable air filter made of beehive polypropylene, made of modules included in the air suction grille on the front panel of the covering cabinet.

## 2 VERSIONS AND MAIN COMPONENTS

### FC Vertical / horizontal concealed installation

- > Bearing structure built from galvanised sheet steel (thickness up to 15/10 mm), insulated by means of Class 1 self-extinguishing panels, supplied with an installation kit (wall screws). The unit is supplied complete with a double condensate collection and drainage system; in case of horizontal installation, condensate is collected in a capacious drip tray.
- > High efficiency heat exchanger made with copper piping and aluminium fins blocked to pipings by mechanical expansion, provided with brass manifolds and air vent valves. The heat exchanger usually comes with water connections mounted on the left, but it can be turned by 180°.
- > Three-speed electrical motor, mounted on vibration damping couplings, complete with permanently activated capacitor and winding thermal protection.
- > Double suction centrifugal fans, statically and dynamically balanced, directly connected to the electrical motor, made with:
  - antistatic ABS, with blades having an airfoil section and offset modules, or aluminium.
- > Honey-comb polypropylene washable air filter, mounted on a galvanised sheet frame protected by a net, easily removable for maintenance operations.  
The filter is secured to the cabinet with ¼-turn screws.

### FF Vertical or horizontal concealed

Supply and installation of GALLETTI model ESTRO FF horizontal/vertical recess-mounted fan coil unit (air intake on front, vertical air flow), mainly consisting of:

- > Bearing structure built from galvanised sheet steel (thickness up to 15/10 mm), insulated by means of Class 1 self-extinguishing panels, supplied with an installation kit (wall screws). The unit is supplied complete with a double condensate collection and drainage system; in case of horizontal installation, condensate is collected in a capacious drip tray.
- > High efficiency heat exchanger made with copper piping and aluminium fins blocked to pipings by mechanical expansion, provided with brass manifolds and air vent valves. The heat exchanger usually comes with water connections mounted on the left, but it can be turned by 180°.
- > Three-speed electrical motor, mounted on vibration damping couplings, complete with permanently activated capacitor and winding thermal protection.
- > Double suction centrifugal fans, statically and dynamically balanced, directly connected to the electrical motor, made with:
  - antistatic ABS, with blades having an airfoil section and offset modules, or aluminium.
- > Honey-comb polypropylene washable air filter, mounted on a galvanised sheet frame protected by a net, easily removable for maintenance operations.  
The filter is secured to the cabinet with ¼-turn screws.

### FB Low body(438mm) floor standing

- > Covering cabinet made of thick steel sheet panel, (10/10 mm), with side parts and air outlet grille (orientable by 180°) made of ABS. The side doors allow the access to the technical space and to the control panel (option).
- > Bearing structure made of thick galvanised steel sheet (up to 15/10 mm), insulated with self-extinguishing Class 1 heat insulating panels and supplied with an installation kit (wall screws).
- > High efficiency heat exchanger, made of copper pipe aluminium fins fixed to the pipes by means of mechanical expansion, equipped with brass manifolds and air purge valve. The units normally come with water connection on the left side, but the heat exchanger can be turned, on the field, by 180°.
- > 3-speed electric motor installed on vibration damping-supports, complete with built in capacitor and thermal protection for the windings.
- > Double-intake centrifugal fans, statically and dynamically balanced and coupled directly to the the electric motor; they are made of:
  - antistatic ABS with staggered blades and wing profile
  - aluminium (models 1, 5 and 6)
- > Washable air filter made of beehive polypropylene, made of modules included in the air suction grille on the front panel of the covering cabinet.

### FBC Low body(413mm) concealed for horizontal and vertical installation

- > Bearing structure made of thick galvanised steel sheet (up to 15/10 mm), insulated with self-extinguishing Class 1 heat insulating panels and supplied with an installation kit (wall screws).
- > High efficiency heat exchanger, made of copper pipe aluminium fins fixed to the pipes by means of mechanical expansion, equipped with brass manifolds and air purge valve. The units normally come with water connection on the left side, but the heat exchanger can be turned, on the field, by 180°.
- > 3-speed electric motor installed on vibration damping-supports, complete with built in capacitor and thermal protection for the windings.
- > Double-intake centrifugal fans, statically and dynamically balanced and coupled directly to the the electric motor; they are made of:
  - antistatic ABS with staggered blades and wing profile
  - aluminium (models 1, 5 and 6)
- > Washable air filter made of beehive polypropylene, made of modules included in the air suction grille on the front panel of the covering cabinet.

### 3 AVAILABLE ACCESSORIES

The wide and complete range of options define these terminal units in order to meet the most different requirements for possible installations. The standard units come along without control panel.

Code	Description	Version
<b>Control panels and thermostats</b>		
CB	Speed switch, installation on the unit	FL-FA-FU-FB
TB	Speed switch mounted on the unit and electromechanical thermostat	FL-FA-FU-FB
TIB	Speed switch mounted on the unit, thermostat and summer/winter selecting switch	FL-FA-FU-FB
MICRO	Microprocessor control on the unit: automatic control of fan coil unit	FL-FA-FU-FB
MICROPRO	Microprocessor control on the unit: automatic control of fan coil unit, valves and electric heating element	FL-FA-FU-FB
MICRONET	Microprocessor control ERGO solution	ALL
SW	Water temperature electronic sensor for MICRO, MICROPRO-D and MICRO-D controls	ALL
CSB	Control mounted on the unit for opening and closing the SM motor-driven regulating louver	FL-FA
TC	Electromechanical thermostat for minimum water temperature in heating mode, mounted on the heat exchanger	ALL
KP	Power interface for connecting in parallel up to 4 fan coil units to one control	ALL
CD	Recess wall-mounted speed switch	ALL
CDE	Wall-mounted speed switch	ALL
TD	Wall-mounted speed switch, electromechanical thermostat and summer-winter selecting switch	ALL
TDC	Wall-mounted speed switch and electromechanical thermostat	ALL
TD4T	Wall-mounted speed switch, electromechanical thermostat and summer-winter selecting switch for 2 or 4-pipe systems with valves	ALL
MICRO-D	Wall-mounted microprocessor control: automatic control of the fan coil unit	ALL
MICROPRO-D	Wall-mounted microprocessor control: automatic control of the fan coil unit, valves and electric heating element	ALL
CSD	Wall-mounted control for opening and closing the SM motor-driven regulating louver	FL-FA-FP-FC
TA	Electromechanical room thermostat	ALL
TA2	Electromechanical room thermostat with summer/winter selecting switch	ALL
<b>Additional heat exchanger</b>		
DF	1 row additional heat exchanger for 4-pipe systems (hot water circuit)	FL-FA-FU-FP-FC-FF
<b>Feet and coverings</b>		
ZA	Two support covering feet	FA
ZAG	Two support covering feet with front grille	FA
ZL	Two support covering feet	FL
ZLG	Two support covering feet with front grille	FL
D	Support spacers	FC
PVL	Rear painted panel for vertical installation fan coil units with cabinet	FL-FU
PVA	Rear painted panel for vertical installation fan coil units with cabinet	FA
PVB	Rear painted panel for vertical installation fan coil units with cabinet	FB
PH	Rear painted panel for horizontal installation fan coil units with cabinet	FU
<b>Motorised valve and drip tray</b>		
VK S	3-way valve with ON/OFF electrothermal motor and hydraulic kit for standard heat exchanger	ALL
VK DF	3-way valve with ON/OFF electrothermal motor and hydraulic kit for DF heat exchanger	FL-FA-FU-FP-FC-FF
GIVK	Valve stem insulation shell	ALL
BV	Auxiliary water drip tray for vertical installation fan coil units	ALL
BH	Auxiliary water drip tray for horizontal installation fan coil units	FU-FP-FC-FF-FB-FBC
KSC	Condensate removal kit	FC-FF-FU-FP
<b>Additional electric heater</b>		
RE	Electric heating element complete with installation kit, safety devices, power relay box, heat resistant grilles	FL-FU-FP-FC-FF
<b>Suction and outlet grilles</b>		
GE+C	Anodised aluminium grille for external air intake, complete with subframe	FL-FA-FU-FP-FC-FF
GEF+C	Anodised aluminium grille for external air intake, complete with filter and subframe	FC-FF-FBC
GM+C	Anodised aluminium double-row finned air outlet grille, complete with subframe	FC-FF-FBC
<b>Inlet and outlet connectors</b>		
RM90	Angular connector for air outlet	FC-FF-FBC
RMD	Straight connector for air outlet	FC-FF-FBC
RA90	Angular connector for air inlet	FC-FF-FBC
RAD	Straight connector for air inlet	FC-FF-FBC
<b>Fresh air intake with louver</b>		
S	Manual external air intake louver	FL-FA-FP-FC
SM	Motor driven external air intake louver	FL-FA-FP-FC

- 1 Water temperature 7/12°C, air temperature 27°C dry bulb, 19°C wet bulb (47% relative humidity)
- 2 Inlet water temperature 50°C, water flow rate same as in cooling mode, inlet air temperature 20°C

- 3 Water temperature 70/60°C, inlet air temperature 20°C
- 4 Sound power measured according to EN 23741 and EN 23742.

## 6 OVERALL DIMENSIONS

### Overall dimensions for F B Low body fan coils, front air intake

- 1 Space for hydraulic connections
- 2 Slots for wall-mounting
- 3 Space for electrical connections
- 4 Standard heat exchanger hydraulic connections
- 5 Condensate discharge

FB	A	C
1 - 4	774	498
5 - 6	984	708
7 - 9	1194	918

### Overall for F BC - vertical / horizontal recess mounted with low cabinet

- 2 Slots for wall-mounting
- 4 Standard heat exchanger hydraulic connections
- 5 Condensate discharge
- 6 Air outlet
- 7 Air intake

FBC	A	C	U	V
1-4	584	498	423	464
5-6	794	708	633	674
7-9	1004	918	843	884

## 7 WIRING DIAGRAMS

### CB In built control panel with fan speed selector

The dashed lines connections must be carried out by the installer

**BU** Blue, medium speed

**BK** Black, maximum speed

**CN** Fast on connector

**CB** In built control panels with fan speed selector

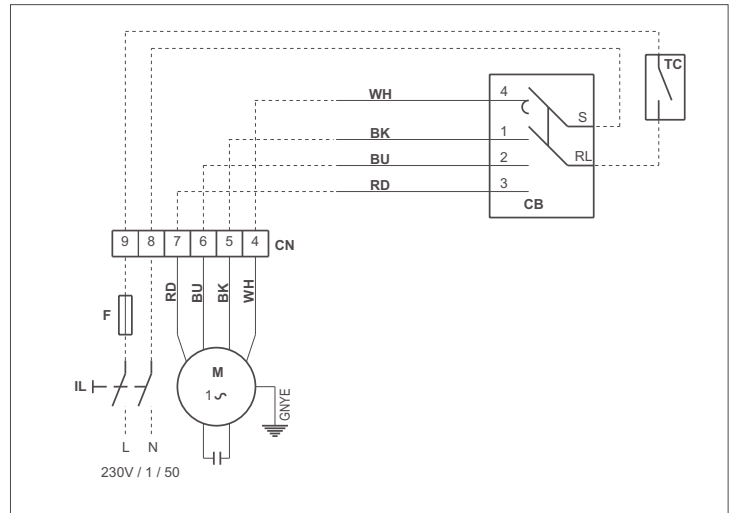

**F** Protection fuse (not supplied)

**IL** Mains switch (not supplied)

**RD** Red, minimum speed

**TC** Fan stop thermostat (option)

**WH** White, common

### TB In built control panel with fan speed selector and electromechanical thermostat

The dashed lines connections must be carried out by the installer

**BU** Blue, medium speed

**BK** Black, maximum speed

**CN** Fast on connector

**F** Protection fuse (not supplied)

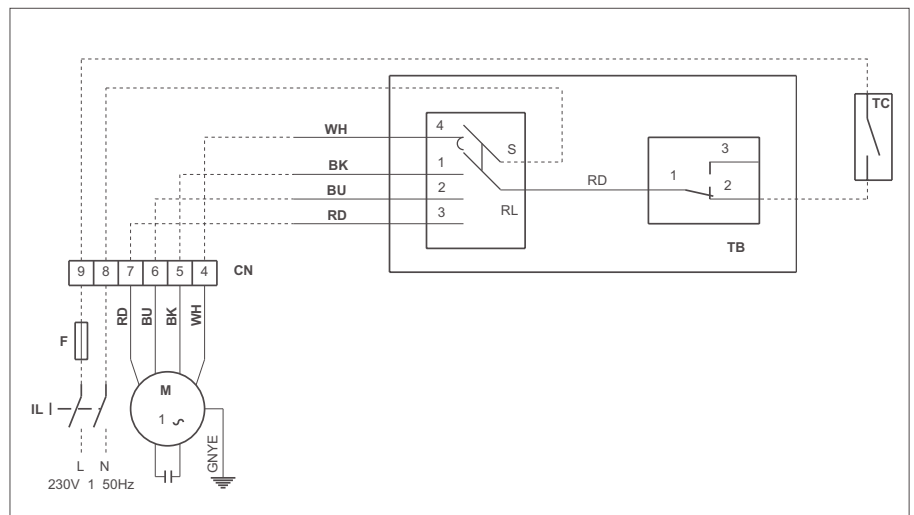

**IL** Mains switch (not supplied)

**RD** Red, maximum speed

**TB** In built control panels with fan speed selector and electromechanical thermostat

**TC** Fan stop thermostat (option)

**WH** White, common

### TIB In built control panel with fan speed selector, thermostat and cooling/heating selector

The dashed lines connections must be carried out by the installer

**BU** Blue, medium speed

**BK** Black, high speed

**CN** Fast on connector

**TIB** In built control panel with fan speed selector, thermostat and cooling/heating selector

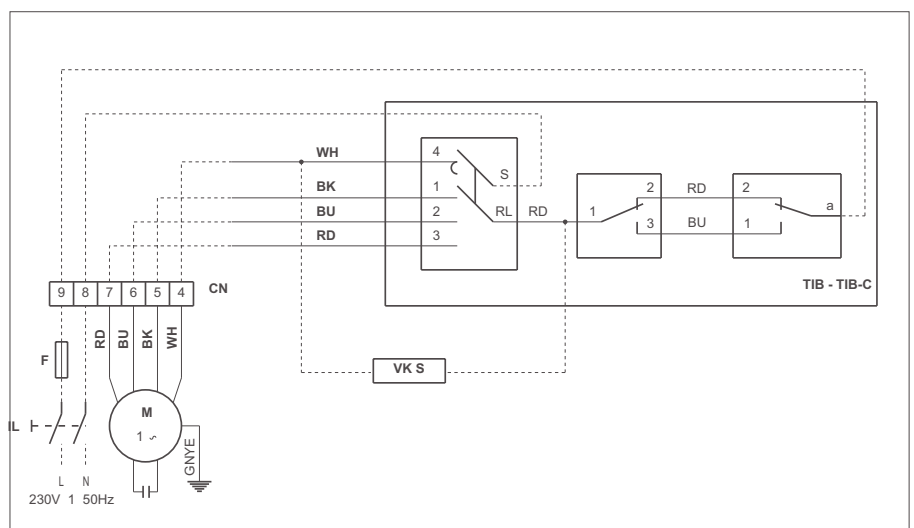

**F** Protection fuse (not supplied)

**IL** Mains switch (not supplied)

**RD** Red, minimum speed

**VK S** Motor driven ON-OFF 3 way valve, standard heat exchanger (option)

**WH** White, common

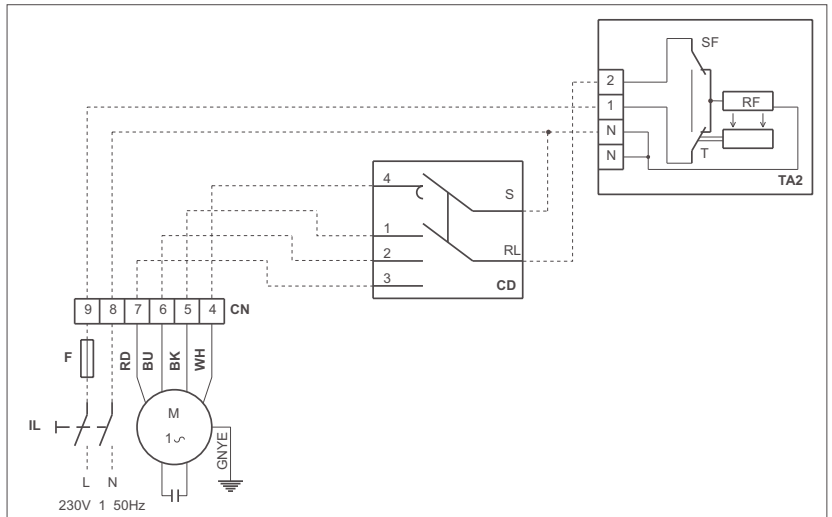

Each fan-coil requires a switch (IL) on the feeder line with a distance of at least 3 mm between the opening contacts, and a suitable safety fuse (F).

## 7 WIRING DIAGRAMS

### CD+TA2 - Flush wall mounted fan speed selector and room thermostat

The dashed lines connections must be carried out by the installer

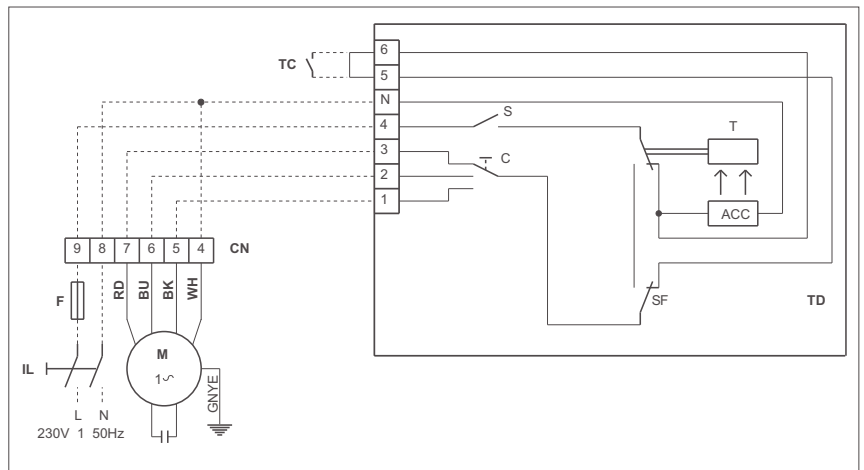

- BU** Blue, medium speed
- BK** Black, high speed
- CD** Flush wall mounted fan speed selector
- CN** Fast on connector
- F** Protection fuse (not supplied)
- IL** Mains switch (not supplied)
- RD** Red, low speed
- TA2** Wall mounted room thermostat (cooling-heating)
- WH** White, common

### TD - Wall mounted control panel with fan speed selector, thermostat and heating cooling / heating mode selector

The dashed lines connections must be carried out by the installer

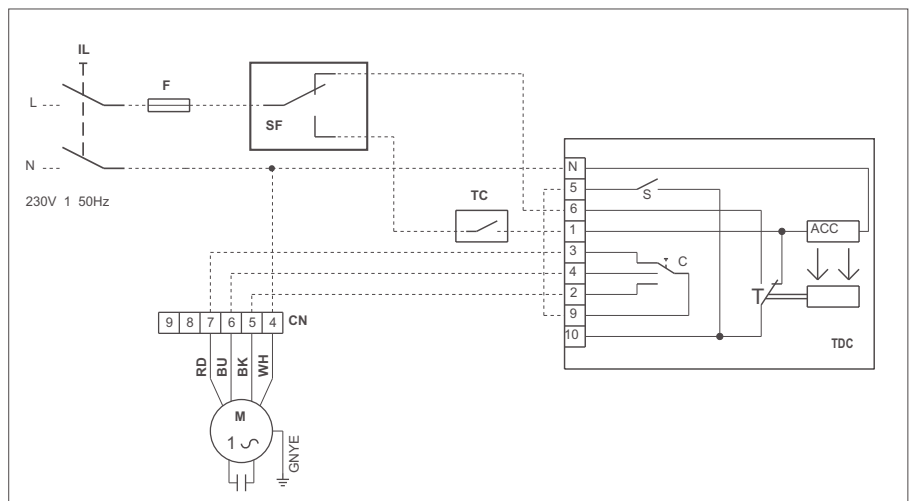

- BU** Blue, medium speed
- BK** Black, maximum speed
- CN** Fast on connector
- TD** Wall mounted control panel with fan speed selector, thermostat and cooling / heating mode selector
- F** Protection fuse (not supplied)
- IL** Mains switch (not supplied)
- RD** Red, minimum speed
- TC** Fan stop thermostat (option)
- WH** White, common

### TDC - Wall mounted control panel with fan speed selector and thermostat

The dashed lines connections must be carried out by the installer

- BU** Blue, medium speed
- BK** Black, maximum speed
- CN** Fast on connector
- TDC** Wall mounted control panel with fan speed selector and thermostat
- F** Protection fuse (not supplied)
- IL** Mains switch (not supplied)
- RD** Red, minimum speed
- SF** Centralized cooling/heating mode selector (not supplied)
- TC** Fan stop thermostat (option)
- WH** White, common

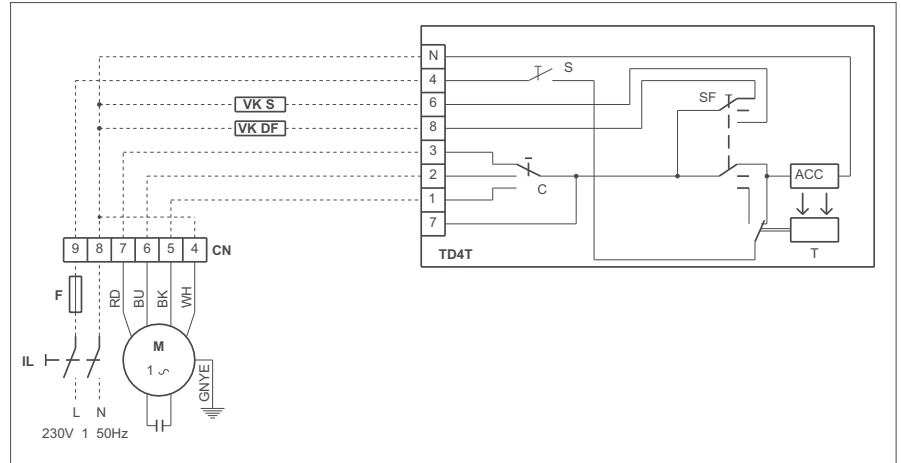

Each fan-coil requires a switch (IL) on the feeder line with a distance of at least 3 mm between the opening contacts, and a suitable safety fuse (F).

## 7 WIRING DIAGRAMS

### TD4T - Wall mounted control panel with fan speed selector, thermostat and cooling / heating mode selector, for the control of the fan coil and valves (2 and 4 pipe systems)

The dashed lines connections must be carried out by the installer

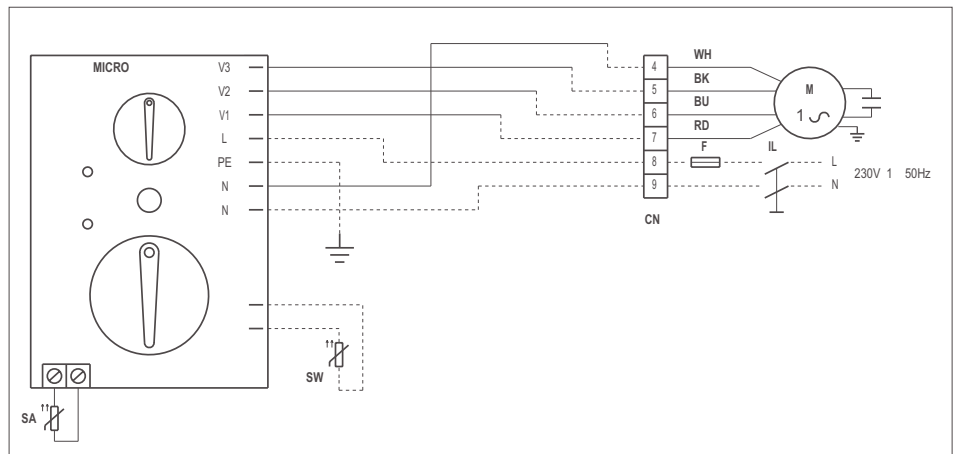

- BU** Blue, medium speed
- BK** Black, maximum speed
- CN** Fast on connector
- TD4T** Wall mounted control panel with fan speed selector, thermostat and cooling / heating mode selector for the control of the fan coil and valves (2 and 4 pipe systems)
- F** Protection fuse (not supplied)
- IL** Mains switch (not supplied)
- RD** Red, minimum speed
- VK S** Motor driven 3 way ON-OFF valve (option), standard heat exchanger, cooling mode
- VK DF** Motor driven 3 way ON-OFF valve (option), DF additional heat exchanger, heating mode
- WH** White, common

### MICRO - Microprocessor in built control panel, for the automatic control of the fan coil

The dashed lines connections must be carried out by the installer

- BU** Blue, medium speed
- BK** Black, maximum speed
- CN** Fast on connector
- F** Protection fuse (not supplied)
- IL** Mains switch (not supplied)
- MICRO** Microprocessor in built control panel for the automatic control of the fan coil
- RD** Red, minimum speed
- SA** Room temperature probe for automatic fan speed selection
- SW** Water temperature probe (option), for the automatic cooling/ heating mode selection.
- WH** White, common

Each fan-coil requires a switch (IL) on the feeder line with a distance of at least 3 mm between the opening contacts, and a suitable safety fuse (F).

## 7 WIRING DIAGRAMS

### MICROPRO Microprocessor in built control panel, for the automatic control of the fan coil, valves and electric heater

The dashed lines connections must be carried out by the installer

- BU** Blue, medium speed
- BK** Black, maximum speed
- CN** Fast on connector
- CRHC** Group of controls connected to the centralised switch RCH
- EXT** External reed contact for the automatic switch ON and OFF of the unit (not supplied)
- F** Protection fuse (not supplied)
- IL** Mains switch (not supplied)
- MICROPRO** In built microprocessor control panel
- MICROPROD** Wall mounted microprocessor control panel
- RCH** Remote switch for the centralized cooling / heating mode selection (not supplied)
- RD** Red, minimum speed
- SA** Room temperature probe for automatic fan speed selection
- SW** Water temperature probe (option for the MICROPROD control), for the automatic cooling/heating mode selection.
- VK S** Motor driven, ON-OFF 3 way valve (option), standard heat exchanger cooling mode
- VK DF** Motor driven, ON-OFF 3 way valve (option), DF additional heat exchanger, heating mode
- WH** White, common

Each fan-coil requires a switch (IL) on the feeder line with a distance of at least 3 mm between the opening contacts, and a suitable safety fuse (F).

## 8 ACCESSORIES

### CB In built speed selector

In built control panel, complete with a 4 positions (3 speed + stop) rotation selector. This control panel, that can be installed on the éstro F L, F A (for this model use the covering frame), F U, F B versions, allows the ON/OFF and fan speed selection of the fan coil unit. The control panel comes complete with cables for the connection to the terminal board of the fan coil unit.

### TB In built control with speed selector and thermostat

In built control panel, complete with fan speed selector and electromechanical thermostat. Fan speed selection and room temperature regulation:

- fan speed manual selection;
- room temperature regulation in the heating mode by means of fan start/stop at a manually set speed and if installed by means of the opening and closing of the regulating valve.
- room temperature regulation in heating and cooling modes with centralised mode selection by means of fan start/stop at a manually set speed and if installed, by means of the opening and closing of the regulating valve.

This control panel can be installed on the éstro F L, F A (for this model use the covering frame), F U, F B versions, is provided with a 4 positions (3 speed + stop) rotation selector and an electromechanical thermostat with a fluid expansion probe (operation range +6/+30°C). The control panel comes complete with cables for the connection to the terminal board of the fan coil unit.

### TIB In built control with speed selector, thermostat and summer-winter selector

In built control panel, complete with fan speed selector, electromechanical thermostat and cooling / heating mode selector. Fan speed selection, room temperature regulation and heating / cooling mode selection.

- fan speed manual selection;
- room temperature regulation in cooling and heating mode, by means of fan start/stop, at a manually set speed.
- room temperature regulation in cooling and heating mode by means of fan start/stop at a manually set speed and, if installed by means of opening and closing of the regulating valve.

This control panel can be installed on the éstro F L, F A (for this model use the covering frame), F U, F B versions, is provided with a 4 positions (3 speed + stop) rotation selector, an electromechanical thermostat with a fluid expansion probe (operation range +6/+30°C) and cooling/heating mode selector.

The control panel comes complete with cables for the connection to the terminal board of the fan coil unit and with an adhesive probe-holder.

### CD - Flush wall-mounted speed selector

Flush wall mounted control panel is provided with a 4 positions (3 speed + stop) rotation selector.

This control panel, that can be matched with all the éstro versions, allows the ON/OFF and fan speed selection of the fan coil unit.

### CDE - Wall-mounted speed selector

Wall mounted control panel is provided with a 3 positions (3 speed) and switch ON/OFF.

The CDE control panel allows the ON/OFF and fan speed selection of the high pressure fan coil unit.

### TD - Wall mounted control with speed selector, thermostat and summer-winter selector

Wall mounted control panel complete with fan speed selector, electromechanical thermostat and cooling / heating mode selector.

Fan speed control, regulation of the room temperature and cooling / heating mode selection:

- manual setting of the fan speed;
- room temperature regulation both in cooling / heating mode, by means of fan start/stop, at a manually set temperature.

This wall mounted control panel can be matched with all the éstro versions.

### TDC - Wall mounted control with speed selector and thermostat

Wall mounted control panel complete with fan speed selector, electromechanical thermostat and cooling / heating mode selector.

Fan speed control, regulation of the room temperature and cooling / heating mode selection:

- manual setting of the fan speed;
- room temperature regulation both in cooling / heating mode, by means of fan start/stop, at a manually set temperature.

This wall mounted control panel can be matched with all the éstro versions.

### TD4T - Wall mounted control with speed selector, thermostat and summer-winter selector, for 2/4 pipe system with valves

Wall mounted control panel provided with fan speed selector, electromechanical thermostat, and cooling / heating mode selector; if installed it controls regulating valves.

Fan speed control and regulation of the room temperature:

- manual setting of the operation fan speed;
  - regulation of the room temperature for 2 and 4 pipe systems, both in heating and cooling mode, by means of fan start/stop at a manually set temperature and by means of opening and closing of the regulating valve.
- This wall mounted control panel can be matched with all the éstro versions.

## 8 ACCESSORIES

### TA - Wall mounted room thermostat

Automatic regulation of the the room temperature:

- only in the heating mode working on the fan motor assembly and on the regulating valve, if installed (ON/OFF operation);
- only in the cooling mode working on the fan motor assembly and on the regulating valve, if installed (ON/OFF operation);
- both in cooling and heating mode, with remote mode selection working on the fan motor assembly and on the regulating valve, if installed (ON/OFF operation).

This wall mounted room thermostat can be matched with all the éstro versions.

### TA2 - Wall mounted room thermostat with summer / winter selector

Wall mounted room thermostat with cooling/heating mode selector.

Automatic regulation of the room temperature both in heating and cooling mode, working on the fan motor assembly and on the regulating valve, if installed.

This wall mounted room thermostat can be matched with all the éstro versions.

### TC - Fan stop thermostat: electromechanical thermostat for minimum water temperature during heating

Fan stop thermostat with automatic resetting, it stops the fan motor assembly when the water temperature in the heat exchanger decreases under the set value (42°C).

Useful only in the heating mode for installation on the finned pack of the heat exchanger.

This fan stop thermostat can be matched with all the éstro versions.

### MICRO - MICRO-D Microprocessor control (in built or wall mounted) - automatic control of the fan coil

Microprocessor control panel for in built (micro) or wall (MICROD) installation, complete with fan speed selector, electronic thermostat and heating / cooling mode selector; for the automatic control of the fan coil unit.

Fan speed control, regulation of the room temperature and cooling/heating mode selection.

- Regulation of the room temperature both in the cooling and heating mode, by means of fan start/stop, at a manually set temperature ;
- Regulation of the room temperature both in the cooling and in the heating mode, by means of the automatic regulation of the fan speed;
- Timer function (not available for the Micro-D)
- Cooling/heating mode selection in the following ways:
  - manual in built;
  - automatic according to the water temperature (with the SW water probe, option);

### KP - Power interface for connection of up to 4 fan coils to a single control panel

The KP master sleeve can be installed to control with a single control panel up to 4 fan coil units (connected in parallel).

This accessory is designed for installation on a DIN drive, usually placed on electric board, can be matched with all the éstro fan coil versions.

**MICROPRO - MICROPRO-D Microprocessor control (in built or wall mounted) - automatic control of the fan coil, valves, electric heater**  
Microprocessor control panel for in built (MICROPRO) and wall (MICROPRO-D) installation complete with fan speed selector, electronic thermostat and cooling/heating mode selector; for the automatic control of the fan working on the valves and electric heater, if installed.

Fan speed control, room temperature regulation and cooling/heating mode selection.

- Room temperature regulation both in the cooling and heating mode, by means of fan start/stop, at a manually set speed.
- Room temperature regulation both in the cooling and heating mode, by means of the automatic regulation of the fan speed.
- timer function (not available for the MICROPRO-D)
- Cooling / heating mode selection in the following way: manual in built; manual remote (centralized); automatic according to the water temperature (with the SW water probe, option for the MICROPRO-D, included in the MICROPRO kit); automatic according to the room temperature (with air temperature probe, option).
- Control of the on-off valves for 2 or 4 pipe systems.
- Control of the electric heater as integration or substitution of the heating circuit with delayed stop of the fan (2 min.).

The Micropro / Micropro-D control panels are provided also with:

- contacts for external signals in order to enable or disable the unit operation;

### MICRONET- Advanced microprocessor control panels for ergo solution

MICRONET is the control panel suitable for the connection to the ERGO SOLUTION. Microprocessor control panels for wall installation complete with fan speed selector, electronic thermostat and cooling / heating mode selector; for the automatic control of the fan working on the valves and electric heater, if installed.

Fan speed control, room temperature regulation and cooling / heating mode selection:

- room temperature regulation both in the cooling and heating mode, by means of fan start/stop, at a manually set speed;
- room temperature regulation both in the cooling and heating mode, by means of the automatic regulation of the fan speed;
- timer function (not available for MICROPRO-D);
- cooling / heating mode selection in the following way:
  - manual in built;
  - automatic according to the water temperature;
  - automatic according to the room temperature;
  - control of the ON/OFF valves for 2 or 4 pipe system;
  - control of the electric heater as integration or replacement of the hot water heat exchanger with delayed stop of the fan (2 min.).

The MICRONET control panels are provided also with contacts for external signals in order to enable or disable the unit operation.

- terminals for the connections with external signals in order to enable or disable the unit operation;
- terminals for the connections with external signals in order to enable or disable the ECONOMY set point (only if combined with ERGO software)
- air temperature probe
- water temperature probe
- RS485
- built-in MODBUS communication protocol
- Built-in Polarity and termination resistance

## 8 ACCESSORIES

### ZA - Pair of covering feet for F A models

The ZA covering feet, designed for the installation on the FA éstro series, are supplied in pairs and include both the supports for fixing them to the bearing structure and the external coverings for fixing them to the cover cabinet.

They can be used either to cover the hydraulic pipes (coming from the floor) or when it is not possible to mount the fan coil unit on the wall. The height of the covering feet is 100 mm.

### PVA - Rear painted covering panel for FA models

This accessory is designed for the installation of the FA fan coil unit on the rear of glass walls. The kit includes an upper and a lower rear panels.

The fan coil unit with the PVA rear panel cannot be fixed on the wall.

### ZAG - Pair of covering feet with front grille for F A models

The ZAG covering feet, designed for the installation on the FA éstro series, are supplied in pairs and include both the supports for fixing them to the bearing structure, the external coverings for fixing them to the cover cabinet and the front covering grille.

They can be used either to cover the hydraulic pipes (coming from the floor) or when it is not possible to mount the fan coil unit on the wall. The height of the covering feet is 100 mm.

### PVL - Rear painted covering panel for FL and F U models

This accessory is designed for installation of the FL and FU on the rear of glass walls. The kit includes an upper and a lower rear panels.

The fan coil unit with the PVL rear panel cannot be fixed on the wall.

### ZL - Pair of covering feet for F L models

The ZL covering feet, designed for the installation on the FL éstro series, are supplied in pairs and include both the supports for fixing them to the bearing structure and the external coverings for fixing them to the cover cabinet.

They are to be used either for covering the hydraulic pipes (coming from the floor) or when it is not possible to mount the fan coil unit on the wall. The height of the covering feet is 100 mm.

### PVB - Rear painted covering panel for FB models

This accessory is designed for installation of the FB on the rear of glass walls.

The fan coil unit with the PVB rear panel cannot be fixed on the wall.

### ZLG - Pair of covering feet with front grille for F L models

The ZLG covering feet, intended for being assembled on the FL éstro series, are supplied in pairs and comprise both the supports for fixing them to the bearing structure, the external coverings for fixing them to the cover cabinet. They are to be used either for covering the hydraulic pipes (coming from the floor) or when it is not possible to mount the fan coil unit on the wall.

The height of the covering feet is 100 mm.

### PH - Rear painted covering panel for FU models horizontally mounted

The rear painted panel PH is designed for the éstro FU only for ceiling installation, with the back side of the unit at sight in order to cover the technical spaces (hydraulic and electric). The fan coil with the PH rear panel can operate only in heating mode.

### GE+C - Anidized aluminium grille for air intake complete with counter-frame

Fresh air intake grille with fixed anodised aluminium fins complete with a galvanised metal sheet counterframe, it is usually combined with the fresh air intake louvers and designed for wall installation.

### D - Supporting brackets for F C models vertically mounted

The D supporting brackets, are supplied in pairs and can be installed on wall mounted recessed fan coil units éstro F C when it is not possible to fix the unit onto the wall.

The height of the supporting brackets is 100 mm.

### GEF+C - Anidized aluminium grille for air intake complete with counter-frame and filter

Air suction grille with fixed anodised aluminium fins, is complete with washable acrylic fibre filter and galvanised metal sheet counterframe; it is usually combined with recessed-mounted fan coils.

## 8 ACCESSORIES

### GM+C - Double row anodized aluminium grille complete with counter-frame

Air outlet grille with a double row of adjustable anodized aluminium fins, complete with galvanised metal sheet counterframe ; it is usually combined with recessed-mounted fan coils.

### S Manual fresh air intake louver

The manual fresh air intake louver allows to carry out the renewal of the room air directly from the fan coil unit.

The quantity of fresh air, filtered and thermally treated by the fan coil, is regulated by setting manually the flap placed inside the louver.

The fresh air intake louver can be installed on all the éstro versions with the exception of the FB and of the FU only if used for floor installation.

This accessory, if installed on fan coil with cabinet (FL, FA and FP ceiling mounted) has to be matched to the proper covering feet (ZL for FL fan coils and ZA for FA fan coils).

### SM Motor driven fresh air intake louver

The motor driven fresh air intake louver allows to carry out the renewal of the room air directly from the fan coil unit.

The quantity of fresh air, filtered and thermally treated by the fan coil, is regulated proportionally from 0 to 100% by means of a servomotor placed inside the louver.

The SM kit is complete with a servomotor (IP54 protection degree, power supply 24V) and a power supply transformer 230V - 24V.

The automatic opening and closing of the louver is possible on signal from auxiliary external contacts (not supplied) such anti-freeze thermostat, timer etc., with possible connection in parallel of more than one servomotor to a single position transducer.

This accessory has to be matched with one of the control panel available as option, CSB (in built installation) and CSD (wall mounted installation), that allow the opening and closing of the louver from 0 to 100%. The motor driven fresh air intake louver can be installed on all the éstro versions with the exception of the FB and of the FU only if used for floor installation.

This accessory, if installed on fan coil with cabinet (FL, FA and FP ceiling mounted) has to be matched to the proper covering feet (ZL for FL fan coils and ZA for FA fan coils).

### CSB in built control for proportional opening and closing of the SM motor driver air louver

Designed for in built installation, on the opposite side of the fan coil control panel it allows the proportional opening and closing from 0 to 100% of the SM motor driven fresh air intake louver.

It is not possible to use the control panel CSB in case of installation of the DF additional heat exchanger (option for 4 pipe systems); in this case the opening of the SM motor driven air intake louver must be controlled by the CSD remote control panel.

### CSD - Wall mounted control for proportional opening and closing of the SM motor driver air louver

Designed for wall installation, it allows the proportional opening and closing from 0 to 100% of the SM motor driven fresh air intake louver.

### DF- Additional heat exchanger for 4-pipe system (hot water circuit)

Additional heat exchanger made of copper pipe and aluminium fins, is used for 4 pipe systems and has to be connected to the heating circuit. The heat exchanger is complete with air purge valve placed on the hydraulic connections.

The mounting kit is complete with a fixing bracket designed to avoid the rotation of the manifolds during the connection of the heat exchanger to the unit.

The performances of the heat exchanger fitted on the éstro fan coil units are certified by EUROVENT that guarantee the reliability of the data indicated in this manual.

### VK - 3-way valve with ON-OFF motor and hydraulic kit

The VK motor driven 3 way / 4 ports ON/OFF valve kit, connected to the control panels for éstro fan coil units allows the regulation of the room temperature stopping the water flow into the heat exchanger.

The VK kit is available in various versions for all the éstro fan coils both for the standard (VK S) and for the additional DF (VK DF) heat exchangers.

The kit is made of:

3 way /4 ports valve with incorporated by-pass, made of brass, with maximum operation pressure 16 bar.

Electrothermal actuator with ON/OFF action (total opening period 4 min.), power supply 230 V

Hydraulic connections kit for the connection of the valve onto the heat exchanger, complete with 2 holders for the balancing and the interception of the fan coil unit.

### BV - Auxiliary drip tray for vertical-mounting units

This accessory is designed to collect any condensate that may form on the valve and the holder. It can be fitted on the all éstro series.

### BH - Auxiliary drip tray for horizontal-mounting units

The BH drip tray, can be used for horizontal installation fan coils to collect the eventual condensate that may form on the ON/OFF 3 way valve (option VK S).

### RE - Additional electric heater with assembly kit, safety devices and power relay box

Useful as heating integration to the hot water system, the RE kit is made of an electric heater with safety thermostat (automatic and manual resetting) and power relay.

The RE electric heater kit has to be matched with the MICROPRO or MICROPRO-D control panel.

### KSC - Condensate removal kit

This device allows to overcome displacements in the condensate drain.

The pump can drain water up to 8 l/h and it is completed by a non return valve on the discharge side.

## 8 ACCESSORIES

### RA / RM - Inlet and outlet connectors

These accessories are designed for éstro FC, FF, F BC fan coils and are used for room ducts when the basic unit (éstro FC) is placed within false ceilings and/or recess wall mounted.

For each configuration, the inlet and outlet connectors are available in straight version and in 90° jointed version.

### GIVK - Valve steam insulation shell

The GIVK valve steam insulation shell it avoids forming itself of condensates in to valve.

The hydraulic attacks are previewed are to right are on the left.

### SW - Water temperature electronic probe for MICRO, MICRO-D and MICROPRO-D controls

Water probe for the MICRO, MICRO-D and MICROPRO-D control panels: automatic selection of the cooling/heating operation mode.

Connected directly to the microprocessor control panels, this probe measures the water temperature inside the heat exchanger.

If the temperature registered is lower than 17°C the unit works in cooling mode and the temperature range of the control panel will be referred to the cooling mode (19 / 31°C); if the temperature registered is higher than 37°C the unit works in heating mode and the temperature range of the control panel will be referred to the heating mode (14 / 26°C).

If the temperature registered is between 17°C e 37°C the control panel will disable the unit operation.

The SW water probe is included in the MICROPRO and MICRONET kit.

## 9 INSTALLATION SUGGESTIONS

Fan coil units should be installed in a position where they heat and cool the room evenly, on walls or ceilings that can bear their weight.

Fit any accessories on the standard unit before installing it.

Read the relevant technical sheets for the installation and use of the accessories.

Keep free space around the fan coil to allow proper operation and ordinary and extraordinary maintenance (see the "overall dimensions" chapter)

Provide a panel to reach the unit in case of recessed mounting (FC models). To avoid excessive stratification of the air in the rooms

heated with a ceiling mounted fan coil you should :

- not exceed installation heights "H" shown in the table at the side referred to maximum operating speed;
- feed the fan coil unit with not excessively hot water (inlet water 50/60°C);
- if possible, place the air intake in the lower part of the room (installation diagram shown on the right).

Install the remote control panel, if any, in a position that can easily be reached by the user to set the functions and that is suitable for the proper detection of the temperature, if provided.

Therefore avoid :

- positions directly exposed to sunlight;
- positions exposed to hot or cold draughts;
- obstacles preventing the proper temperature detection

If the system is shut down during the winter months, drain off the water from the system to prevent damage due to freezing; if antifreeze solutions are used, check the freezing point using the table shown at the foot of the page.

Glycol percentage in weight	Freezing temperature (°C)	Capacity correction factor	Pressure drop correction factor
0	0	1,00	1,00
10	-4	0,97	1,05
20	-10	0,92	1,10
30	-16	0,87	1,15
40	-24	0,82	1,20

## 10 MAINTENANCE

Estro fan coils do not require special maintenance: it is enough to clean the air filter periodically.

The motor does not need maintenance as it is fitted with self-lubricating bearings. Replace the air filter once a year, using original spare parts ; the fan coil model can be seen on the ID plate on the internal side-panel.

Refer to the "installation, use and maintenance" manual supplied with the product for all cleaning and maintenance operations.
