**DECLARATION OF CONFORMITY** 

Galletti S.p.A. hereby declares, under its sole responsibility, that WH high wall fan coil units series have been designed, built and tested in conformity with the specifications of European Directives:

- 98/37/CE (Machinery Directive)
- 73/23/CEE (Low Voltage Directive)
- 89/336/CEE (Directive on Electromagnetic Compatibility)
- 97/23 CE (PED)

Bentivoglio, 29/03/2004

Galletti S.p.A.

Luigi Galletti

**OPERATING LIMITS**

- > thermal fluid: water
- > Water temperature: from 7°C to 75°C
- > maximum operating temperature: 10 bar
- > air temperature: from 5°C to 35°C
- > air temperature with moist bulb: max 24°C
- > power supply: +/- 10%

**1 CONSTRUCTIVE FEATURES**

WH high wall mounted fan coils, proposed in three models with cooling capacities ranging from 2 to 4.28 kW, make the ideal indoor unit for air conditioning systems in public buildings, shops and hotels.

Coupled with Galletti water chillers and heat pumps, they provide an environmentally friendly alternative to direct expansion systems.

WH fan coils are hallmark by the quality of their components and their versatility of use:

- > High efficiency heat exchanger made with copper piping and aluminium fins, low pressure drop on the water side.  
The heat exchanger comes complete with manual air valves and hoses for connection to the system or to the rear valve-fitted panel (optional accessory).
- > Extremely quiet tangential fan connected to a 3-speed electric motor with a low number of revolutions.
- > Motorised air outlet baffle for adjusting the direction of the airflow from the fan coil.
- > The high quality plastics used allow operation with hot water up to a temperature of 75°.
- > Microprocessor controlled operation with control of air intake temperature and that of the water inside the heat exchanger that regulates the heating function according to the temperature of the water (from 38°C to 75°C).  
The auto restart function makes it possible to automatically restore unit management after blackouts.
- > Infra-red remote control that when combined with the microprocessor control allows simple, versatile management of the fan coil:
  - temperature setting
  - manual or automatic fan speed selection
  - manual or automatic operating mode selection
  - cooling
  - ventilation
  - heating
  - automatic air outlet baffle oscillation with position control
  - night mode setting
  - Automatic 24-hour on-off timer
  - Clock
  - LCD for displaying all fan coil functions

The remote control comes packed separately, complete with wall bracket.

- > Pilot lights on the front panel indicate unit operation.
- > Air filter easily extractable for cleaning.

**2 AVAILABLE ACCESSORIES****BP**

Rear panel complete that allow the installation of the 3way valve

**VK**

3-way ON/OFF valve for even more accurate regulation of room temperature.  
Electrothermal ON-OFF valve motor, suitable for 230 volt power supply and connection to the unit's terminal board.

### 3 REMOTE CONTROL FUNCTION

#### REMOTE CONTROL FUNCTIONS

- If the room temperature is lower than the setting temperature, the heating mode is activated. The motor driven valve is triggered. The internal fan works at the set speed.
- If the room temperature is equal to the setting temperature + 0.5°C, the heating mode is stopped. The motor driven valve and the internal fan are disconnected.
- The setting temperature range is 15° - 30°C. The internal fan speed can be set on Min, Med, Max and Auto.
- The motor driven valve will be activated/deactivated after a delay time of 30 sec
- If the water temperature is equal to 38°C, the motor driven valve is activated and the internal fan is deactivated.
- If the water temperature is >38°C the motor driven valve is activated. The internal fan will continue working at the set speed.
- If the water temperature is >75°C the motor driven valve is deactivated. The internal fan will continue working at the set speed.

#### COOLING

- If the room temperature is higher than the set temperature, the cooling mode is activated. The motor driven valve is activated. The internal fan works at the set speed.
- If the room temperature is equal to the setting temperature -0.5°C, the cooling mode is stopped. The motor driven valve is deactivated. The internal fan works at the set speed.
- The setting temperature range is 15° - 30°C.
- The internal fan speed can be set on Min, Med, Max and Auto.
- The motor driven valve will be activated/deactivated after a delay time of 30 sec.
- If the water temperature is equal to or lower than 2°C, the motor driven valve is deactivated and the internal fan continues working at the set speed.

#### TIMER

- The switch off timer can be set only when the system is ON.
- The switch on timer can be set only when the system is OFF.
- The maximum setting time is 24 hours.
- Switching the unit on/off will cancel the timer mode.

### 4 RATED TECHNICAL DATA

	Fan speed		WH10	WH20	WH30
